

# HippoWeight®

This weighing platform of 2m by 1m allows you to weigh your horses up to a maximum weight of 1500kg.

The information generated is directly received by HippoVision on a PC and is retained by the weighing equipment. This allows you to follow the weight changes of your horses.

Why and when measure the weight of your horses?

- To maintain their weight and form.
- During feeding.
- Whilst on a controlled diet.
- During training.
- Before or after a competition.
- To monitor changes in weight as an indicator of health.

In the best case, the human eye can only observe a change of weight by a horse if is greater than 40kg. Thanks to HippoWeight you can regularly check the weight of your horses. Maintaining the weight and form of an athlete is essential to success and a major asset in obtaining the best performance.

The HippoWeight scales bring an essential check to trainers and owners by providing essential information on the form of their athletes and to not lose track of the rate of progression.

A robust weighing scale of 2m by 1m, it transmits its information to HippoVision installed on a PC by Wi-Fi. The scales are managed via touch screen control.
